cc termination signal upstream of a spacer DNA and a second loxP site, the CC loxP sites are in the same orientation so that the first loxP site, the construct further comprises spacer DNA are excisable upon exposure to Cre. The construct further comprises spacer DNA downstream of the shRNA encoding sequence, a second loxP site downstream of the shRNA encoding cc sequence, the loxP sites are in the same orientation so that the spacer DNA and second stem-encoding sequence are excisable upon exposure to Cre. The U6 promoter comprises a distal sequence element (DSE), a proximal cc sequence element (PSE), and a TNTA box, operably linked, where the construct comprises a first loxP site downstream of the shRNA encoding equence, and a second loxP site between the DSE and the PSE, the loxP cc sites are in the same orientation so that the shRNA encoding cc sequence, and a second loxP site between the DSE and the TATA box are cc excisable upon exposure to Cre. The construct also comprises a first loxP site and a second loxP site, the sites are interrupted by spacer DNA, cc site and a second loxP site, the sites are interrupted by spacer DNA, between the DSE and the PSE, the loxP sites are in the same orientation so that the same orientation cc cre. The construct is useful for the treatment of a disease, which is caused by aberrant gene function. The disease is a dominant, gain-of-function, both physiologic and pathologic, in specific cell groups and cc in specific ages, in normal and diseased pathways.

This sequence represents the construct UbCP-lox-RFP-lox-mirMSOD2-EGFP. In this construct, the Ubiquitin C promoter (UbCP) normally transcribes RFP CC mRNA, which terminates at a polyA site. However, because the RFP gene is construct to loxe sites, upon exposure to cre, the RFP gene is excised and the construct is converted to UbCP-lox-mirMSOD2-EGFP. The resulting CC construct of the invention comprises a message that contains an intron with an CC shRNA (small hairpin) against the mouse SOD2 gene and an EGFP gene. The CC construct of the invention comprises a U6 promoter operably linked to a Cfirst loxe site upstream of the promoter and a second loxe site upstream of the promoter and a second loxe site the construct further comprises a CC downstream of the promoter and encoding sequences are in the same CC exposure to Cre. The shRNA encoding sequence, the loxe sites are in the same CC upon exposure to Cre. The shRNA encoding sequence sare excisable constrion, the loop-encoding portion comprising a first loxe site operably linked to a transcription termination signal upstream of a spacer DNA and second loxe site, the loxe sites are in the same orientation so that the loxe site, termination signal and spacer DNA are excisable upon exposure to Cre. The construct further comprises spacer DNA downstream of the spacer DNA, and a first loxe site within the loop-encoding portion of the shRNA encoding sequence, a second loxe site downstream of the spacer DNA and sequence, the loxe sites are in the same orientation so that the spacer DNA and second stem-encoding sequence are excisable upon exposure to Cre. The U6 promoter comprises a distal sequence element (DSB), a proximal sequence element (DSB), a and a TATA box, operably linked, where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New construct comprises a U6 promoter operably linked to a small hairpin RNA (shRNA) encoding nucleic acid sequence, useful for regulating shRNA expression in cells or animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              {\tt ss}; hairpin; Neuroprotective; {\tt shRNA}; {\tt miRNA}; aberrant gene function; {\tt gain-of-function} mutation; neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 6; SEQ ID NO 8; 88pp; English

문 S 밁 S 밁 S 밁 á 밁 δ 밁 δ 밁 S 밁 S 문 5 밁 S 밁 Ś US-10-006-922A-12 (1-225) x ADW43588 (1-4300) Query Match: DB: Percent Similarity: Best Local Similarity: CC encoding sequence, and a second loxP site downstream of the shRNA CC encoding sequence, and a second loxP site between the DSE and the PSE, CC the loxP sites are in the same orientation so that the shRNA encoding CC sequences and a portion of the promoter comprising the PSE and the TATA CC box are excisable upon exposure to Cre. The construct also comprises a CC first loxP site and a second loxP site, the sites are interrupted by CC spacer DNA, between the DSE and the PSE, the loxP sites are in the same CC exposure to Cre. The construct is useful for the treatment of a disease, CC which is caused by aberrant gene function. The disease is a dominant, CC gain-of-function mutation, e.g. a neurological disease is a dominant, CC constructs methods, kits, and compositions are useful for investigating CC constructs, both physiologic and pathologic, in specific cell groups CC and in specific ages, in normal and diseased pathways. CC preparation of a recombinant vector comprising a heterologous gene cc sequence such as an anti-apoptotic gene e.g. bcl-2 or PTEN, a determination/differentiation gene such as the dopaminergic determination determination factor Nurri, a gene capable of inducing neuronal migration e.g. cc neurophilin or SDF-1 or a transcription factor gene such as NeuroD or CC BMP4. The present invention describes non-human transgenic animals that cc have been transfected with such a vector that can be used for screening compounds in vitro to identify those with neurogenic properties capable of regulating neural stem cell activity, neurogenesis and/or neuronal cc differentiation, which can subsequently be used in the development of capacity of the pharmaceutical compositions. Furthermore, these transgenic can mails can be used for the in vivo tracking of newly generated neurons, can swell as for transplanted or migrating neuronal determined cells. Cc neurological disorders e.g. epilepsy or stroke and for the enhancement of clasming and/or memory skills caused by neurodegenerative disorders such cas parkinson's, Huntington's or HIV-dementia, as well as psychiatric cor brain malformation. Hence, these compositions exhibit vasotropic, can toornvulsant, cerebroprotective, antiparkinsonian, neuroprotective, conoctropic and anti-HIV activities. This polynucleotide sequence is the fusion construct DNA of the reporter gene DSRed2 under the control of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PTEN; dopaminergic determination factor; Nurri; neuronal migration; neurophilin; SDF-1; NeuroD; BMP4; transgenic; neurogenic; neurolgical disorder; epilepsy; stroke; learning; memory skill; neurodegenerative disorder; Parkinson's; Huntington's; HIV-dementia; psychiatric disorder; tumourous disorder; brain malformation; vasotropic; anticonvulsant; cerebroprotective; antiparkinsonian; neuroprotective; nootropic; anti-HIV; regulatory sequence; proliferative neuronal determined cell; anti-apoptotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-NOV-2004

Plasmid pLL3.2 nucleotide sequence

SEQ ID NO:4.

lentiviral vector; functional packaging signal; multiple cloning site; antimicrobial; gene therapy; infection; plasmid; pLL3.2; circular; gene;

gene

```
The present invention describes a lentiviral vector comprising a nucleic acid whose sequence includes a functional packaging signal, a multiple cloning site (MCS), and at least one additional element selected from a second MCS, a second MCS into which a heterologous nucleic acid is inserted, an HIV FLAP element, an expression-enhancing posttranscriptional regulatory element, a target site for a site-specific recombinase, and a self-inactivating (SIN) LTR. Also described: (1) a lentiviral vector comprising the RNA polymerase III promoter; (2) a collection of at least two lentiviral vectors; (3) a three plasmid
                                                                                                                                    New lentiviral vector comprising a nucleic acid whose sequence includes a functional packaging signal, a multiple cloning site (MCS), and at least one additional element, useful for treating infectious diseases.
                                                                                                                                                                                                                                                    06-SEP-2002; 2002US-0408558P.

The invention is useful for screening a number of substances for their ability to influence the production of BDNF in living organisms. The present sequence is zebrafish brain-derived neurotrophic factor (BDNF) gene construct DNA. This sequence is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid construct useful for screening substances for their ability to influence production of brain derived neurotrophic factor (BDNF), comprises promoter of BDNF gene and red fluorescent reporter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7495 BP; 2249 A; 1599 C; 1659 G; 1988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 26; SEQ ID NO 5; 56pp; English.

                       CC BMP4. The present invention describes non-human transgenic animals that CC have been transfected with such a vector that can be used for screening CC compounds in vitro to identify those with neurogenic properties capable of regulating neural stem cell activity, neurogenesis and/or neuronal CC differentiation, which can subsequently be used in the development of CC appropriate pharmaceutical compositions. Furthermore, these transgenic CC animals can be used for the in vivo tracking of newly generated neurons, CC as well as for transplanted or migrating neuronal determined cells.

CC Accordingly, such compositions can be used in gene therapy for CC neurological disorders e.g. epilepsy or stroke and for the enhancement of CC neurological disorders e.g. epilepsy or stroke and for the enhancement of CC as Parkinson's, Huntington's or HIV-dementia, as well as psychiatric CC disorders, tumourous disorders of the nervous system or a developmental CC or brain malformation. Hence, these compositions exhibit vasotropic, CC anticonvulsant, cerebroprotective, antiparkinsonian, neuroprotective, conception vector phubCxpromobSRedZ, which comprises the reporter gene conception of the newly service and the reporter gene conception to the control of the human reservations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens.

Specifically, it refers to the preparation of a recombinant vector comprising a heterologous gene sequence such as an anti-apoptotic gene e.g. bcl-2 or PTEN, a determination/differentiation gene such as the doppaminergic determination factor Nurrl, a gene capable of inducing neuronal migration e.g. neurophilin or SDF-1 or a transcription factor gene such as Neurophile that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bcl-2; PTEN; dopaminergic determination factor; Nurr1; neuronal migration; neurophilin; SDF-1; Neuron; BMP4; transgenic; neuronal stem cell activity; neuronal differentiation; neurological disorder; epilepsy; stroke; learning; memory skill; neurological disorder; Parkinson's; Huntington's; HIV-dementia; neurodegenerative disorder; Parkinson's; Huntington's; HIV-dementia; psychiatric disorder; tumourous disorder; brain malformation; vasotropic; anticonvulsant; cerebroprotective; antiparkinsonian; neuroprotective; anostropic; anti-HIV; regulatory sequence;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 20; SEQ ID NO 8; 270pp; English.

The present invention describes a lentiviral vector comprising a nucleic acid whose sequence includes a functional packaging signal, a multiple cloning site (MCS), and at least one additional element selected from a second MCS, a second MCS into which a heterologous nucleic acid is inserted, an HIV FLAP element, an expression-enhancing posttranscriptional regulatory element, a target site for a site-specific recombinase, and a self-inactivating (SIN) LTR. Also described: (1) a
                                                                                                                                                                                                                                                                                                                                                                                                    misc_feature

```
CC collection of at least two lentiviral vectors; (3) a three plasmid CC collection of at least two lentiviral vectors; (3) a three plasmid CC lentiviral expression system; (4) a four plasmid lentiviral expression CC system comprising the three plasmid lentiviral expression system, further comprising a four plasmid comprising a nucleic acid sequence that encodes CC Rev, operably linked to a promoter; (5) a cell comprising the lentiviral vector; (6) a cell comprising a provirus derived from the lentiviral CC vector; (7) a transgenic animal, at least some of whose cells contain a CC producer cell line; (9) a method of producing lentiviral vector; (8) a method for achieving controlled expression of a heterologous nucleic acid in a target cell; (11) CC a method for achieving controlled expression of a heterologous nucleic cell type or tissue-specific manner; (13) a composition comprising the CC lentiviral vector, and a delivery agent that enhances delivery of the CC lentiviral vector and a carrier; (15) methods of reversibly inhibiting or CC cell type or tissue-specific manner; (16) a method of treating the CC condition; and (17) a kit comprising the lentiviral vector and a carrier; (16) a method of treating or CC preventing infection by an infectious agent, or a disease or clinical CC condition; and (17) a kit comprising the lentiviral transfer plasmid and CC can be used in gene therapy. The lentiviral vector, compositions and cCC exemplification of the plasmid plias. 5 nucleotide sequence, which is used in the CCC exemplification of the present invention.
exemplification of the present invention.

                                                                                                                                The invention relates to a novel method for screening for inducers or combibitors of a DNA repair pathway by contacting at least one component of a DNA repair pathway with a non-circularized retroviral cDNA in the presence and absence of a test compound, and determining whether circularization of the cDNA is increased or decreased in the presence of the test compound. The DNA repair pathway components have the following continuities anti-HIV, cytostatic, virucide, antidiabetic, and condulate a DNA repair pathway and/or retroviral activity. The compound is useful for identifying compounds that consolidate a DNA repair pathway and/or retroviral activity. The compound is useful in manufacturing a pharmaceutical composition for the treatment of a crtroviral infection (e.g. AIDS, HIV infection, cancer, human adult T-cc cell leukaemia, lymphoma, feline immundeficiency virus, Type I diabetes or multiple sclerosis) or for increasing the efficiency of gene delivery cin a gene therapy. This polynucleotide represents a retroviral cDNA consolidation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening for compounds that modulate a DNA repair pathway and/or retroviral integration, useful for treating retroviral infection, comprises determining the amount of a retroviral cDNA circularization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      inducer; inhibitor; DNA repair pathway; anti-HIV; cytostatic; virucide; antidiabetic; neuroprotective; retroval; infection; AIDS; HIV infection; cancer; human adult T-cell leukaemia; lymphoma; feline immunodeficiency virus; Type I diabetes; multiple sclerosis;

                                                                                                                                                                                                                          ફ
                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                       US-10-006-922A-12 (1-225) x ADM82792 (1-9782)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for screening for inducers or cc inhibitors of a DNA repair pathway by contacting at least one component co f a DNA repair pathway with a non-circularized retroviral cDNA in the presence and absence of a test compound, and determining whether cc circularization of the cDNA is increased or decreased in the presence of the test compound. The DNA repair pathway components have the following cc activities: anti-HIV, cytostatic, virucide, antidiabetic, and cc meuroprotective. The method is useful for identifying compounds that cc used in manufacturing a pharmaceutical composition for the treatment of a cc retroviral infection (e.g. ADDS, HIV infection, cancer, human adult T-c cell leukaemia, lymphoma, feline immundeficiency virus, Type I diabetes cor multiple sclerosis) or for increasing the efficiency of gene delivery cl a gene therapy. This polynucleotide represents a retroviral cDNA carman activity approach of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the CDNA sequence of drPP583 from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa drPP583 is a full-length cDNA encoding a novel fluorescent protein (nrP). Fluorescent protein can be used in fluorescent labeling, a useful tool for marking a protein, cell or organism of interest. Unlike other markers used in protein labeling, such as beta-galactosidase and luciferase, fluorescent proteins do not require an exogenous cofactor or substrate. Methods involving fluorescent proteins are also less laborious and less difficult to control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent labeling, where a control than the traditional methods of fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and control than the traditions of the class and better suitability for larger excitations compared to prior art fluorescent proteins such as green fluorescent protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            750nm and more usually from 540nm to 580nm and emission maximum ranging from 275nm to 775nm and more usually from 565 to 605nm. The chromoproteins or fluorescent proteins are useful as labels in analyte detection assays, as selectable markers in recombinant DNA applications, as biosensors in prokaryotic and eukaryotic cells e.g. as pH indicator and as in vivo markers in animals. They are also useful in sunscreens and as selective filters. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 898 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ₹

CC Discosoma red fluorescent protein (DsRed) variant having a reduced CC Discosoma red fluorescent protein (DsRed) variant having a reduced CC and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 CC and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 CC amino acids, given in the specification, where the substitutions at the AB CC conatining a vector which comprises (I) operatively linked to an CC conatining a vector which comprises (I) operatively linked to an CC expression control sequence, and an unit to assay the variant fluorescent grotein fluorescence, and assaying fluorescence of the variant fluorescent protein produced by (VII), where variant fluorescent protein fluorescence is indicative of transcriptional activity. A polymucleotide comprises is useful for the analysis of in vivo concent protein produced, where the target protein admount of a carget protein produced, where the target protein and amount of a carget protein produced, where the target protein is fused to the marker, as a complement to or alternative for the green fluorescent protein or its spectral variant, for detecting induction of transcriptions, in capplications involving fluorescence energy resonance transfer (PRET), capplications and acceptors towards or away from each other, for making fluorescent sensors for protein kinase and phosphatase activities or indicators for ions and molecules such as Cal., Znl., for identifying the protein as asmple, for identifying a specific consecut for identifying a region or condition that regulates the activity useful contains an enzyme or for determining the plu of the sample. (I) is useful for identifying a region or condition that regulates the activity of an expression control sequence. This sequence encodes Discosoma red control of a first and second molecule, for determining the plus of the activity of the control of the movement of the activity of the protein protein variant fast Tl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Discosoma red fluorescent protein; DsRed; AB interrace; Acting fluorescent protein variant; transcription induction detection fluorescence energy resonance transfer; FRET; protein kinase; fluorescence charge; ion indicator; ds; mutant; fast Tl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic.

```
The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, useful molecular biology, e.g. in immunoassays or in tracking protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-APR-2002; 2002US-00121258

The present invention relates to nucleic acid that encodes a rapidly maturing chromo or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant. The protein is useful in applications involving nucleic acid encoding a chromo- or fluorescent protein and is useful for producing a chromo and/or fluorescent protein which involves growing the cell, whereby the protein is expressed, and isolating the protein substantially free of other proteins. The protein is useful in applications involving chromo- or fluorescent protein and is useful as pclications involving chromo- or fluorescent protein and is useful as pcR primers, hybridization probes, etc. The expression cassettes are useful for synthesizing related proteins. The chromoproteins are useful as coloring agents which are capable of imparting color or pigment to a particular composition which are capable of imparting color or pigment to a particular composition which are capable of imparting color or passettes in an adjusted effection assays, e.g. assays for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acid encoding a rapidly maturing chromo- or fluorescent mutant of a Cnidarian chromo- or fluorescent protein or its mutant, useful for applications involving chromo- or fluorescent proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mutant-type DsRED encoding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-JUL-2004 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          03-JUL-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mutant; mutein; ds.

                                                                                                                                                                biological analytes of interest and as selectable markers in recombinant DNA applications, e.g. the production of transgenic cells and organisms. The fluorescent proteins find use in a variety of different applications, e.g. in fluorescence resonance energy transfer (FRET) applications in prokaryotic and eukaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescent reporting groups by using microscopic imaging and electronic analysis, as second messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins also find use in protease cleavage assays. The proteins can also be used is assays to determine the phospholipid composition in biological membranes and as a fluorescent timer. The present sequence represents the mutant-type DBRED encoding sequence.

CC The invention relates to a green fluorescent protein (GFP) that comprises CC at least 80% identity to the GFP superfolding mutant appearing as CC ADM13335 that has at least one amino acid substitution selected from CC e.g., a substitution at position 30 that is an arginine or a conservative CC variant of arginine and measurable fluorescence activity. Also included CC are directed-evolution for generating an enhanced folding variant of a CC polypeptide (comprising mutating applymucleotide encoding CC polypeptide of interest to generate a library of mutated polymucleotides, CC linking mutated polymucleotides to polymucleotide encoding folding interference domain to form fusion protein (FP) constructs, expressing CC PP, and selecting FP that display optimal folding activity in relation to FP comprising wild-type polypeptide and folding activity in relation to FP comprising variant of a fluorescent protein generated by the method, an cenhanced folding variant of a fluorescent protein generated by the method, an cenhanced folding variant of a chromophoric protein generated by the CC introduced folding variant of a chromophoric protein generated by the constitution of the polypeptide to a poorly folding CC domain, to form a fusion protein, mutating the first domain, detecting an CC increase in the amount of activity generated by a first mutated fusion protein in comparison to a fusion protein comprising a wild-type first CC domain and the poorly folding, joining a second domain, thus identifying a comparison to a fusion protein comprising the wild-type second domain and created by a first mutated fusion protein motorial material mutated fusion protein comprising the wild-type second domain and the poorly folding, joining a second domain and the created fusion protein comprising the wild-type second domain and creativity generated by a second domain for the mutated fusion protein comprising the wild-type second domain and creativity generated by a second domain protein according to the mutated fusion protein compri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 40; 46pp; English

CC The invention describes a polynucleotide sequence (I) encoding a CC Discosoma red fluorescent protein (DSRed) variant having a reduced CC propensity to oligomerise, comprising amino acid substitutions at the AB CC and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 amino acids, given in the specification, where the substitutions result CC in reduced propensity of the DsRed variant to form tetramers. (I) is CC useful for detecting transcriptional activity by providing a host cells constining a vector which comprises (I) operatively linked to an CC expression control sequence, and assaying fluorescence of the variant fluorescent protein fluorescence, and assaying fluorescence of the variant fluorescent cells constining a fusion protein is useful for the analysis of in vivo considerable in protein is useful for the analysis of in vivo considerable in susful for the analysis of in vivo considerable in produced, where the target protein and amount of a carget protein produced, where the target protein and amount of a complement to or alternative for the green fluorescent protein or its spectral variant, for detecting induction of transcriptions, in capplications involving fluorescence energy resonance transfer (FRET), considerable and acceptors towards or away from each other, for making contains an enzyme or for detecting induction of transcriptions, in considerable for ions and molecules such as Ca2+, Zn2+, for identifying the protein for identifying a region or condition that regulates the activity of an expression control sequence. This sequence encodes Discosoma red constant dimerz.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, usefi in molecular biology, e.g. in immunoassays or in tracking protein movement in cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 681 BP; 145 A; 231 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coding sequence for the variant dimer2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                멂
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
The present sequence is the nucleotide sequence of humanised dirF9583/dmrP952. Amplified wild-type coding region fragments from drFP583 and dmrP9592 were digested with restriction endonucleases and combined cogether to produce a hybrid construct. drFP583 is a full-length cDNA encoding a novel fluorescent protein (nFP) from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa. The hybrid sequence was changed to optimise the codons for expression of the protein in mammalian cells. Fluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein, cell or organism of interest. Unlike other markers used in protein labeling, such as beta-galactosidase and luciferase, fluorescent proteins do not require an exogenous cofactor or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            substrate. Methods involving fluorescent proteins are also less laborious and less difficult to control than the traditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorophore derivative. Novel fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and protein localization studies, and in fluorescence resonance energy transfer (FREF) reactions. They may have improved properties and better suitability for larger excitations compared to prior art fluorescent proteins such as green fluorescent protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 678
                                                                                                                                                                                                                                               161
                                                                                                                                                                                                                                                                                                    141

                                     US-10-006-922A-12 (1-225) x AAD46280
                                                                                                                                                                                            The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is a DNA encoding Discosoma sp. drFP583/dmFP592 (6/9Q) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fluorescent protein; chromoprotein; protease cleavage assay; filter; fluorescence activated cell sorting application; fluorescent timer; biosensor; fluorescence resonance energy transfer application; FRET; colouring agent; recombinant DNA application; analyte detection assay; subsection; second messenger detector; drFP583 protein; dmFP592 protein

Fluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein; call or organism of interest. Unlike other markers used in protein labeling, such as beta-galactosidase and luciferase, fluorescent proteins do not require an exogenous cofactor or substrate. Methods involving fluorescent proteins are also less laborious and less difficult to control than the traditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorophore derivative. Novel fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and protein localization studies, and in fluorescence resonance energy transfer (FRET) reactions. They may have improved properties and better suitability for larger excitations compared to prior art fluorescent proteins such as green
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is derived from the nucleotide sequence of humanised hybrid drPP583/dmPP592. drPP583 is a full-length cDNA encoding a novel fluorescent protein (nPP) from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa. The hybrid sequence was changed to optimise the codons for expression of the protein in mammalian cells. The present sequence encodes two substitutions, KISQ and T2175, which were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel fluorescent protein from non-bioluminescent useful for fluorescent labeling and as markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lukyanoy SA,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
The present sequence is derived from the nucleotide sequence of humanised hybrid drpps83/dnpps92. drpps83 is a full-length cDNA encoding a novel fluorescent protein (npp) from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa. The hybrid sequence was changed to optimise the codons for expression of the protein in mammalian cells. The present sequence encodes three substitutions, K15Q, K83M and T217S, which were incorporated by random mutagenesis. Pluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein, cell or organism of interest. Unlike other markers used in protein do not require an exogenous cofactor or substrate. Methods involving fluorescent proteins are also less laborious and less difficult to control than the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15-JUN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Discosoma sp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         traditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorophore derivative. Novel fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and protein localization studies, and in fluorescence resonance energy transfer (FRET) reactions. They may have improved properties and better suitability for larger excitations compared to prior art fluorescent proteins such as green
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 678 BP; 142 A; 218

                                                                                                                                                                                                                                                                                            This cDNA encodes a fluorescent protein (dmFP592) from Discosoma sp. "magenta", a non-bioluminescent species of the genera Anthozoa. The fluorescent colour is observed under usual white light or ultraviolet light. It has an absorbance maximum at 573 nm and an emmission maximum at 593 nm. The polynucleotides of the invention can be used to produce the proteins recombinantly, and as a source of primers and probes for identifying related proteins. The fluorescent proteins have applications in fluorescent labeling, as fluorescent markers for gene expression and protein localization studies, and in fluorescence resonance energy transfer (FRET) reactions. They may have improved properties and better suitability for larger excitations, compared to prior art fluorescent proteins such as green fluorescent protein from Aequorea victoria, which has an excitation maximum at 395 nm, a second excitation peak at 475 nm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2000-423379/36.

NPP-9 is present in an environment other than its natural environment and has an absorbance maximum ranging from 375nm to 775nm and more usually from 560nm to 590nm and emission maximum ranging from 395nm to 795nm and more usually from 580 to 610nm. The chromoproteins or fluorescent proteins are useful as labels in analyte detection assays, as selectable markers in recombinant DNA applications, as biosensors in prokaryotic and ewkaryotic cells e.g. as pH indicator and as in vivo markers in animals. They are also useful in sunscreens and as selective filters. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                An Anthozoa chromo- or fluorescent protein (P1) present in an envother than its natural environment, useful as a label in analyte detection assays and as a selectable marker in recombinant DNA applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-266409/27.

```

The present invention describes a eukaryotic chromosome (I) comprising one or several att sites, where an att site is heterologous to the chromosome, and permits site-directed integration in the presence of lambda-integrase. Also described: (1) a platform artificial chromosome expression system (ACss) (II) comprising several sites that participate in recombinase catalysed recombination; and (2) a method (M1) for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-10-006-922A-12 (1-225) x ACC44649
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               introducing a heterologous nucleic acid into a platform artificial chromosome. (I) can be used in gene therapy. (MI) is useful for introducing a heterologous nucleic acid molecule into a platform artificial chromosome, preferably an ACes. (II) is useful for producing a artificial chromosome, preferably an ACes. (II) is useful for producing a transgenic animal (e.g. a fish, insect, reptile, amphibian, arachnid, or mammal) by introducing (II) by cell fusion, lipid-mediated transfection by a carrier system, microinjection, microcall fusion, electroporation, microprojectile bombardment or direct DNA transfer into an embryonic cell, preferably a stem cell or an embryo. (II) comprises a heterologous nucleic acid that encodes a therapeutic product which is useful for making a library of ACes comprising random portions of a genome. ACC44612 to ACC44732 and ABP96650 to ABP96657 represent sequences used in the exemplification of the present invention
